

Guide for (Vinyl lettering) Plotter

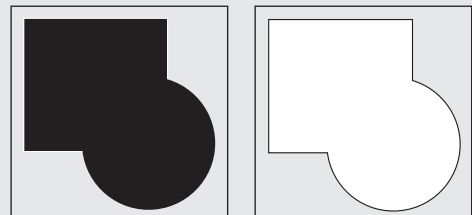

Fonts / other elements

- **Only vector files** and elements can be used, no raster files.
- All fonts must be outlined.
- Artwork can be setup using colours if desired, but is not crucial.
- All layers must be flattened

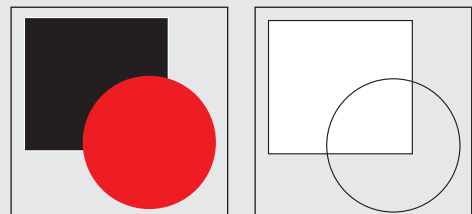

Paths

Images with paths that overlap will need to be merged (see below)

Because the two elements (pictured) will be printed as one, the paths will need to be joined, otherwise the two elements will be cut separately

Images that have elements that will need to be printed separately should have separate paths, so they can be cut separately

Colour

As the vinyl plotter can cut designs on a range of materials and colours, you will need to indicate what colour vinyl you intend to use.

Printed proof:

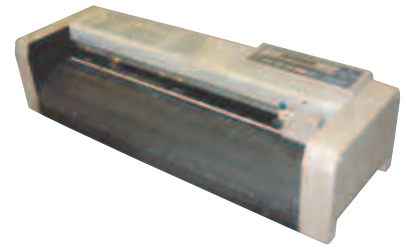

We requested that all finished art be supplied with a printed proof. We will proceed without one if requested, however asking us to do so waives VFX's responsibility for the cost of any rework.

Saving files

- Save all files in eps format (preferably out of Illustrator), making sure to follow these instructions:
- Illustrator version 5 or earlier
- Tiff Black & White preview
- PostScript Level 1

NB: If you are using Illustrator CS the option to back-save can be found in the “Export” option in the “File Menu”. All other versions of Illustrator have this option in the “Save” or “Save As” dialogue box.

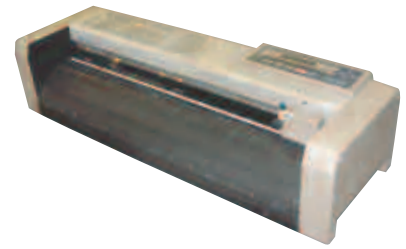

Sending art:

You can supply finished art on CD or DVD in either Mac or PC format. You can also email artwork to admin@vfx.com.au or via our FTP server (available upon request).
